**for education programme 6B07103- Heat Power Engineering**

The educational program 6B07103-Thermal Power Engineering is aimed at training specialists in the field of energy supply, maintenance of energy systems, complexes and installations. The features of the educational program are its orientation to the needs of the energy industry of the region. The implementation of the educational program is planned in close partnership with companies and enterprises of the relevant fields of activity, the program contains a significant practical component in academic disciplines and modules, long-term professional practices of students in partner companies and enterprises throughout the entire period of study. To implement the educational program, contractual relations have been formed with partner organizations to provide educational facilities and production sites for students on their basis, which are planned to be used in organizing students' training at the workplace, during professional practices, during practical classes. Also, the university has its own equipped educational laboratories for conducting classes on the development of students' professional competencies on their basis. The application of dual training in the educational program 6B07103-Thermal power engineering is timely, dictated by the strategic priorities of the republic and strategic objectives for the development of the energy industry. The content of the educational program is developed on the basis of best practices in the implementation of dual programs in foreign countries, which will improve the quality of training of specialists, ensure their employment in the training profile, rapid adaptation in the workplace. Graduates of the educational program 6B07103-Thermal Power engineering will be widely in demand at facilities, enterprises and companies in the energy industry.
