On the joint work of the Semey branch of the main network of JSC NC KTZh and Electrotechnical College in KAZDUAL project

For many years the Electrotechnical College has been training specialists of electric power profile for production enterprises, power engineering and transport. Graduates of the college, working in the subdivisions of the enterprise, as well as students of the speciality "Electrical power supply (by branches)", studying under the programme of dual training within the framework of the KAZDUAL project, show excellent theoretical knowledge and practical skills, possess ingenuity, strive to improve the level of knowledge and qualification.

In addition, our company co-operates with Electrotechnical College in the issues of retraining and professional development of our employees.

Engineering and technical workers of Semey branch of the main network are supervisors and reviewers of diploma projects of graduates of the college, members of the certification examination commission.

In the process of joint work on KAZDUAL project with students of the pilot group, we can say with confidence, that this project gives students an opportunity to master practical skills in modern production conditions at a higher level. They are more oriented to their future profession, they are more motivated to obtain qualifications for further work in production.

I am sure that the work in the project will bring qualitative results to all interested participants.
